

# Balloon Puzzle 2D Documentation

## Overview

The **Balloon Puzzle 2D** project is thoughtfully developed and user-friendly. Function names are clear, and scripts provide step-by-step guidance. This documentation explains the project folders functions. If you encounter any issues, please contact us at [blackrosedevelopers@gmail.com](mailto:blackrosedevelopers@gmail.com).

## Project Structure

### 1. Art

Art folder is subdivided into two folders.

#### A. Materials

Contains 7 various materials used in the game, which can be customized with different colours or textures including two physic materials.

#### B. Sprites:

Contains 28 unique sprites game UI (PNG)

### 2. Prefabs

The Prefabs folder has 34 prefabs that can be used throughout the gameplay.

### 3. Scenes

- **MainMenu**: this is the starting scene of the game which will guide you to the main game play scene or exiting the game and has level buttons in it.
- **Scene-1**: this is the main game play scene which contains 5 levels

#### 4. Scriptable Objects

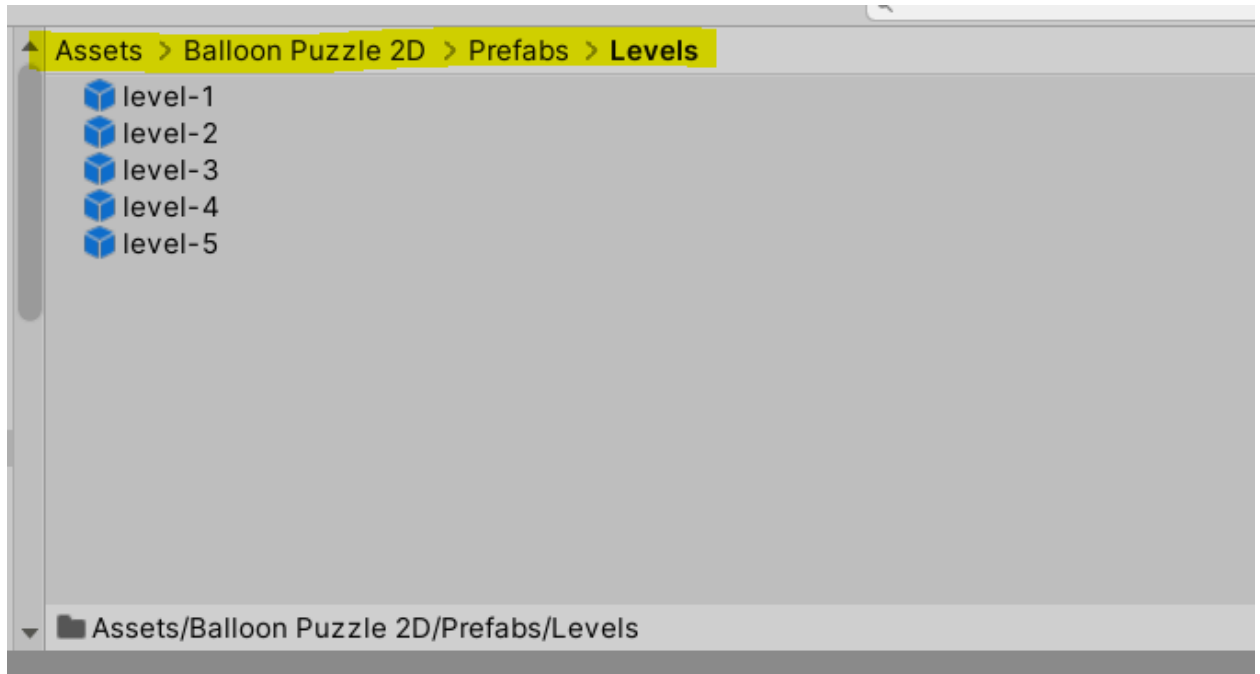

- **Data Storage**: Main storage of game data (number of levels and unlocked ones)
- **Contents**: this scriptable object contains the levels
- **Gameplay Data**: Contains level number, win state and the game result
- **UIData**: Contains 4 different UI elements
- **Level 1 - 5**: contains scriptable objects of the game levels which have data of each level

#### 5. Scripts

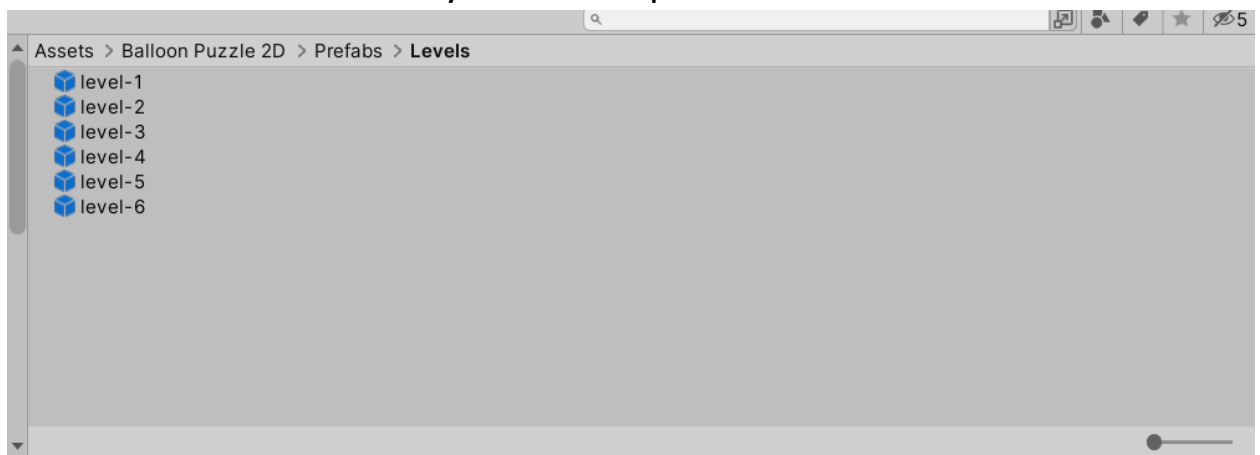

21 Scripts with clear names and functions to ensure easy understanding.

#### How to add new levels:

- 1- Navigate to Project – Prefabs folder. You can see we have 5 different levels so far.

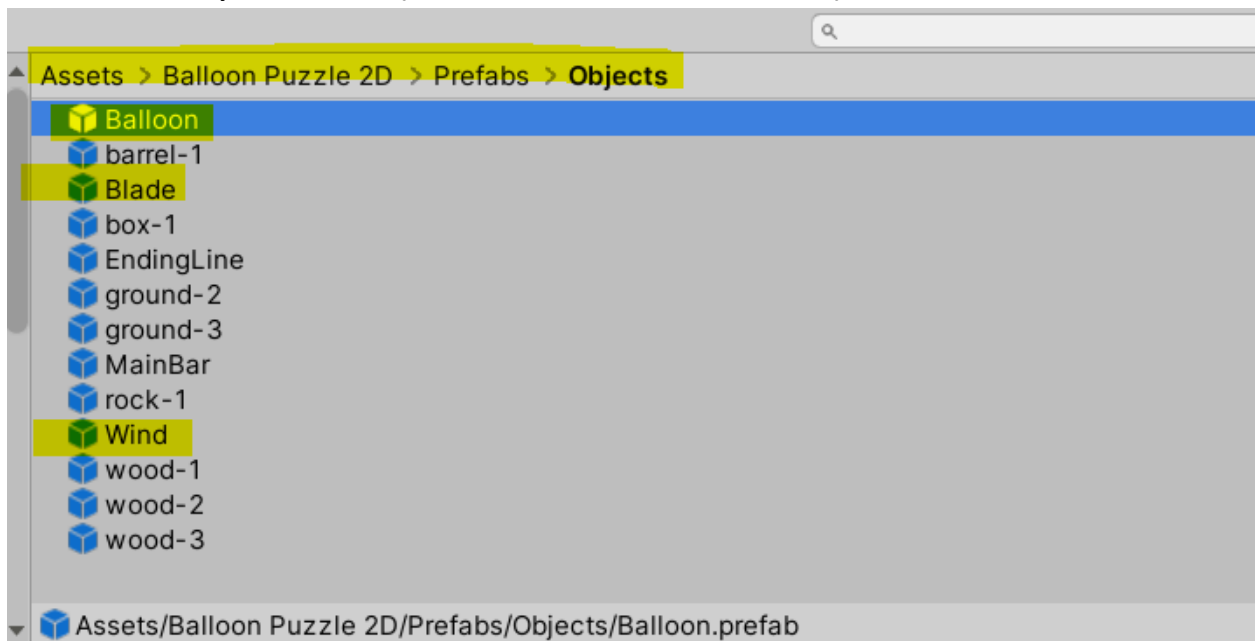

- 2- In order to create a new level, we need to create a new prefab. Here I create level-6 as my new example level.

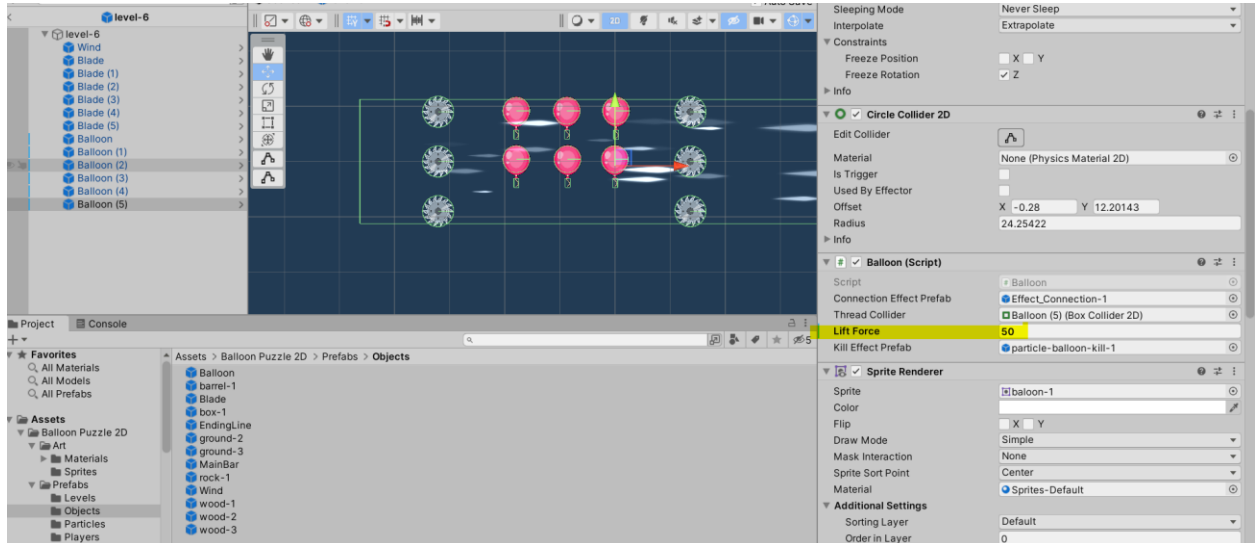

- 3- Now you can navigate to prefabs – objects folder and decorate your level with prefabs there. You can use three different prefabs

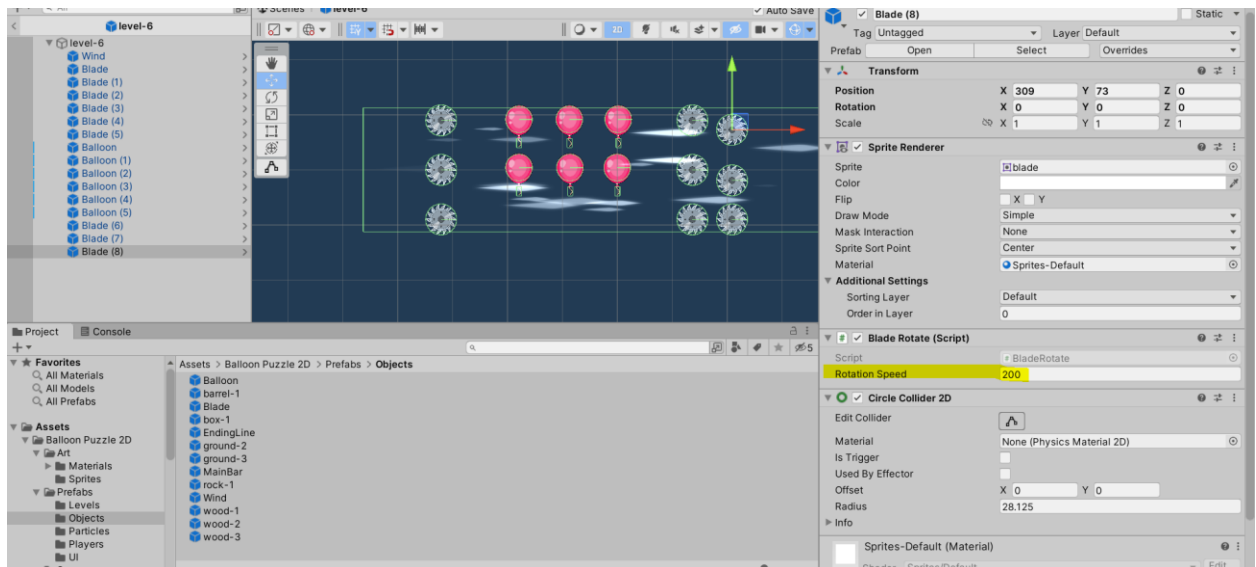

to decorate your level.(Balloon, Blade and Wind)

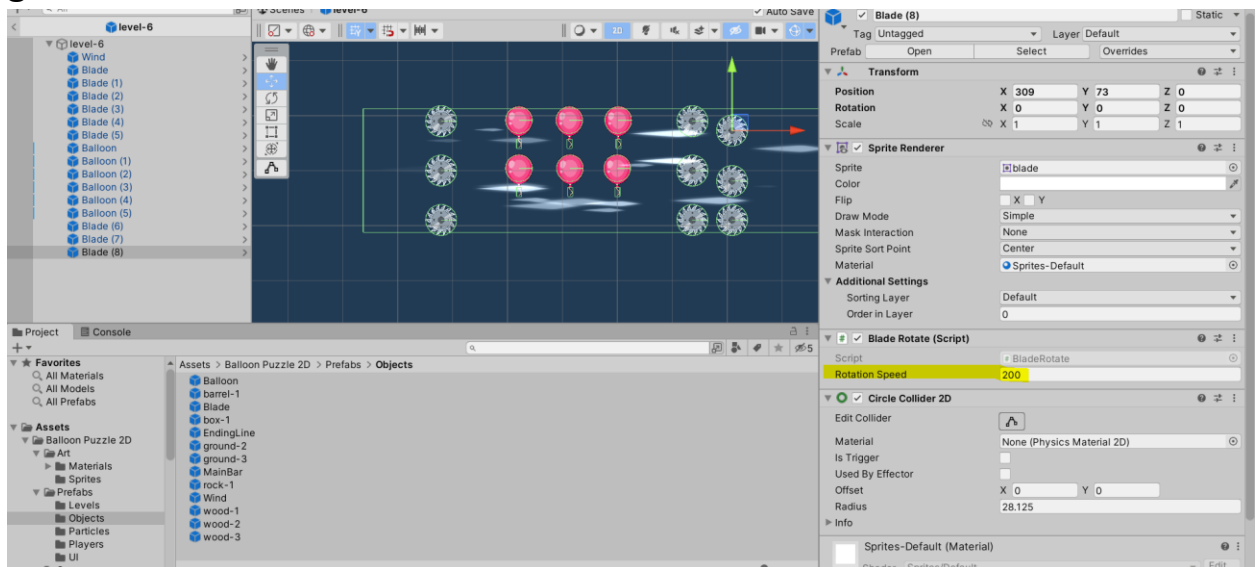

- 4- Here in level-6 I add three prefabs. First with balloon, you can add as many balloons as you like and set their lift force which determines to lift the wood with what speed.

Then by adding blades you can make your level more difficult. If the balloon or you cube (sphere) hits the blade, they blow up. You can set the Rotation Speed for the blades.

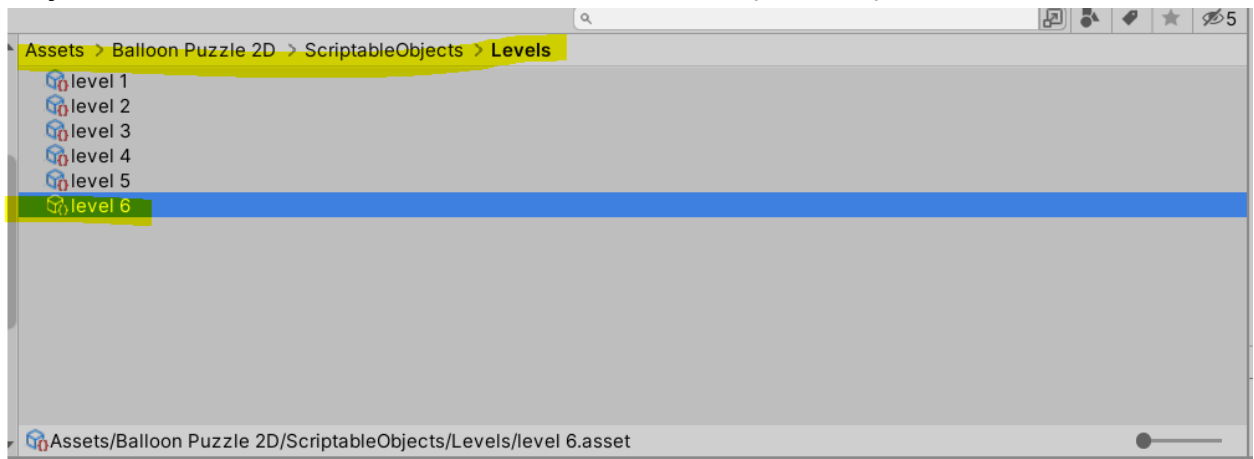

Lastly, you can set up Wind and the force. If the force has greater number, it would blow the balloons faster and as a result the game would be more difficult.

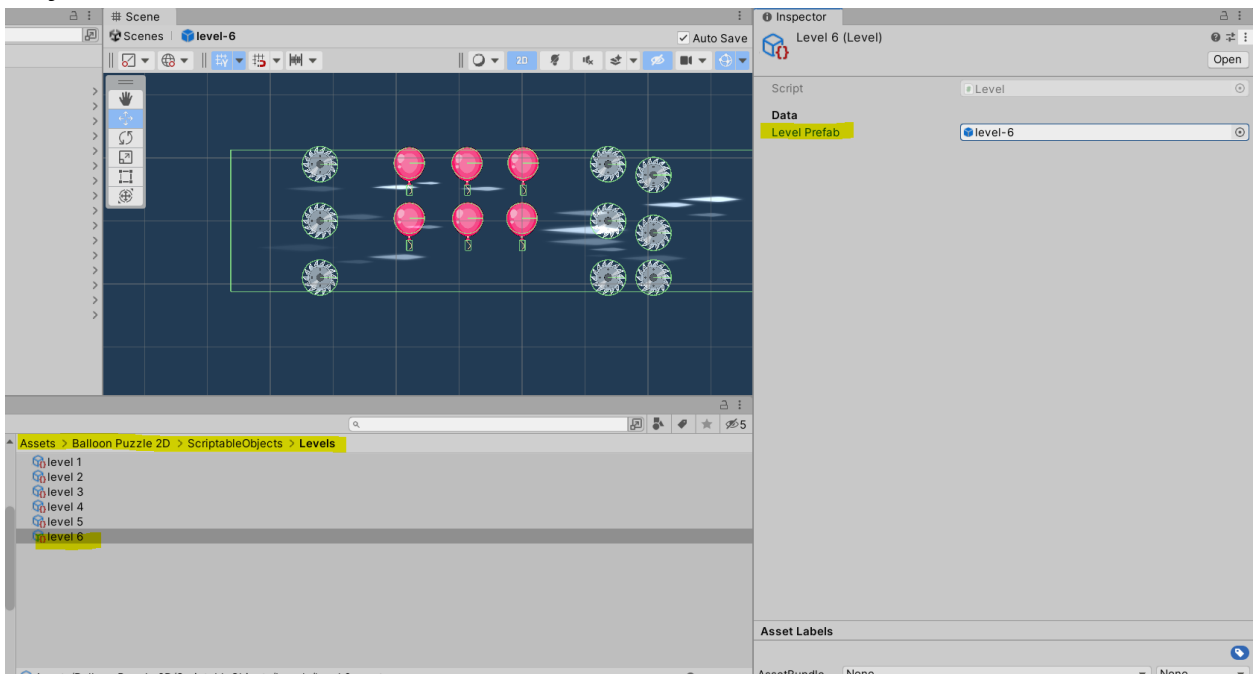

5- After you are done with designing your level, navigate to scriptable objects – levels folder. We already have 5 scriptable

objects for our levels, so I add the new one(level 6)

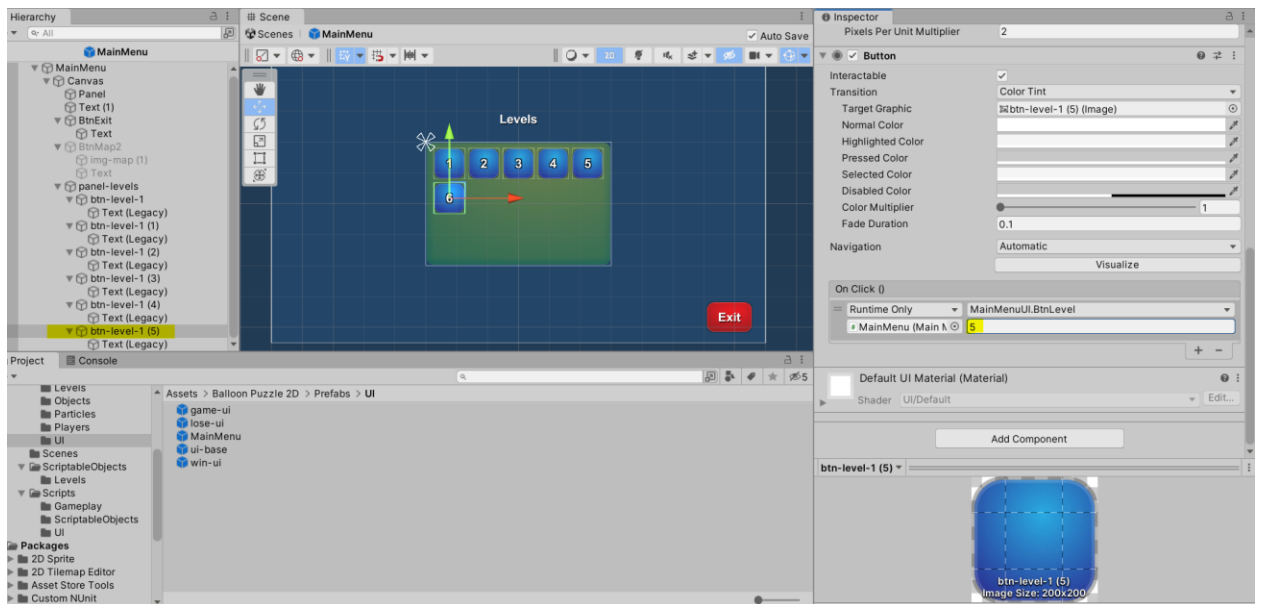

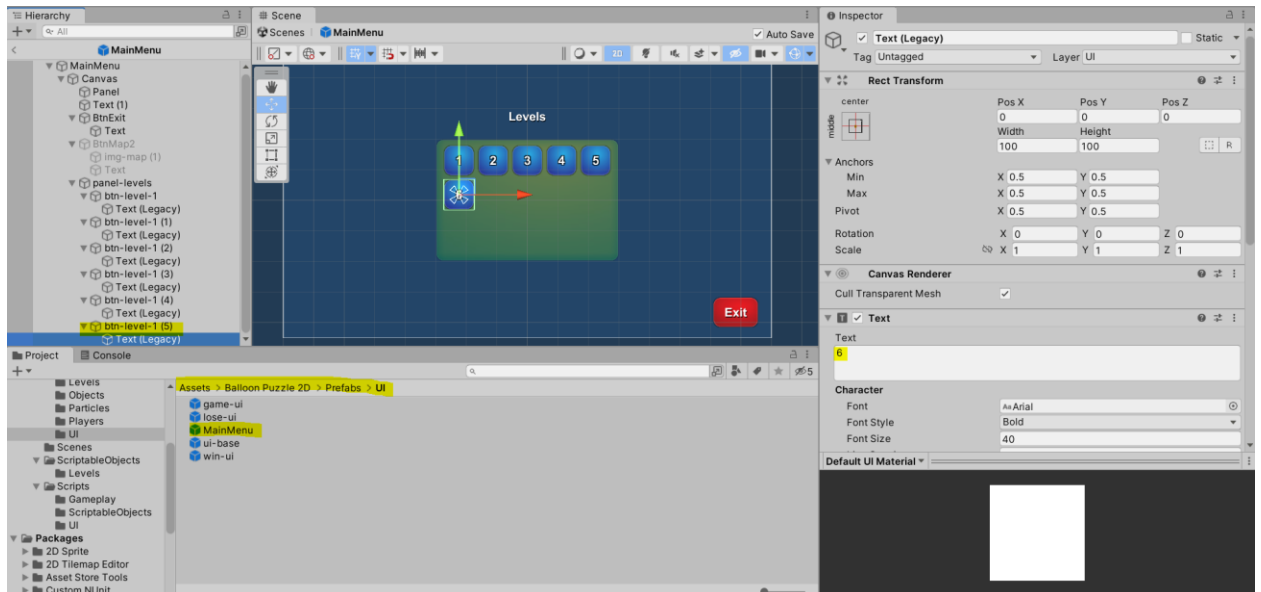

6- You should assign the new prefab of your level to the scriptable object.

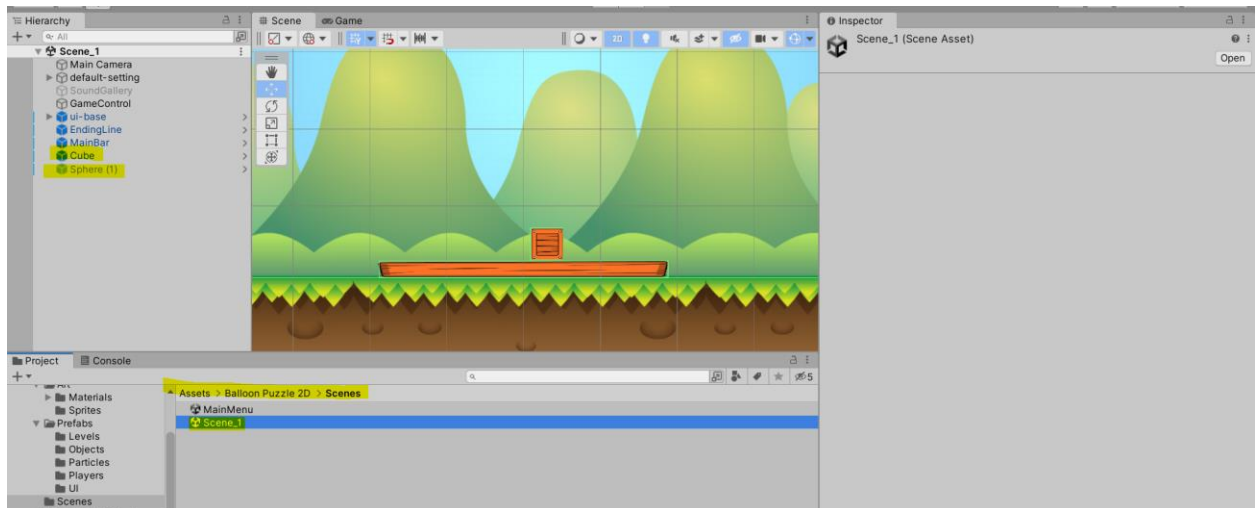

7- You should also update your MainMenu prefab by adding the new level number in the UI and assign it's click function to play new

level as shown in screens.

8- Lastly, you can use either the box (Cube) or the Sphere as your main player to get to the ending line. Just simply activate any of

them which you want in your Scene-1.
